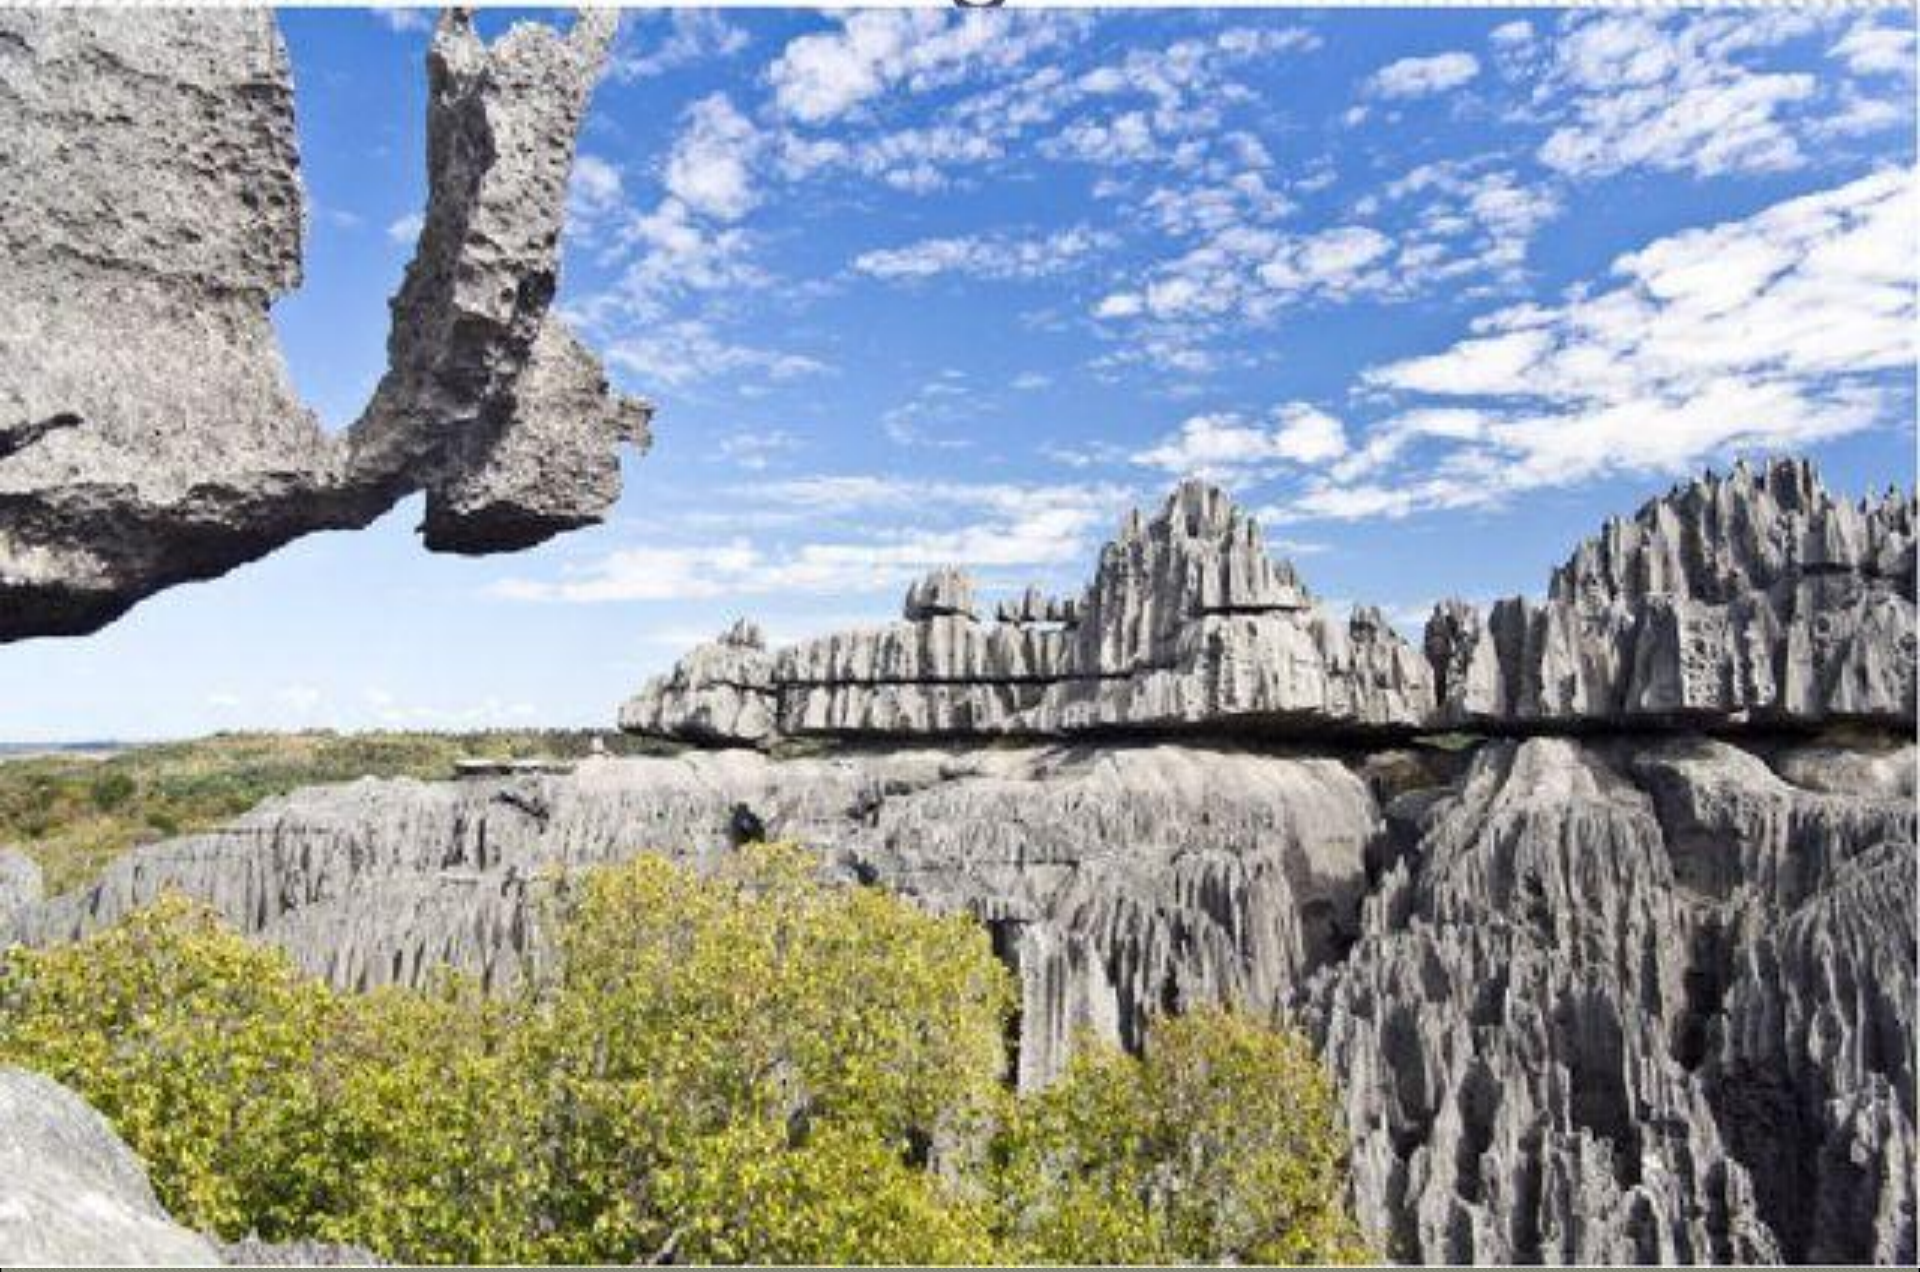
PROJECT

Madagascar



- Deforestation and habitat destruction
- Agricultural fires
- Erosion and soil degradation
- Overexploitation of living resources including hunting and over-collection of some species of wild unusual animals and plants

- Madagascar has some of the highest biodiversity on the planet. Unique to the island are more than 50 types of lemurs

Indri lemur

Lepilemur

- Madagascar is thought to have more than 300 species of frogs, 99% of which are endemic

Aye - aye

- The aye-aye is one of the strangest creatures in the world. The aye-aye resembles a large house cat but with the face of a ferret, bat-like ears, teeth that grow constantly like those of a rod ack hands

- Madagascar is home to 258 bird species of which 115 are found nowhere else in the world.

Day gecko
