

Canada: nature and wildlife

BY ANASTASIA LEYDERMAN

8 "B"

A little bit about the climate

Canada is located in the north of North America.

The climate there is quite cold. In some regions winter temperature is -45°C .

The average summer temperature is $+21^{\circ}\text{C}$.

Plants of Canada

The Canadian taiga, stretching from the northwest to the east for 4 thousand kilometers, mainly consists of black spruce and aspen in the east and white firs, pines, larches, thujas in the west.

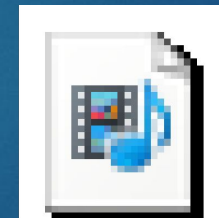

There are also oak groves, maples, white birch, cedar, larch, mountain ash.

Animals of Canada

The fauna of Canada is very rich and diverse. Wolves, foxes, lynx and coyotes live in the wild forests.

The vilogo antelope, a species of deer live in the south. Bison and moose live in the territories of the northern and western parts of the country.

National parks

Canada has also got a lot of different national parks, for example: "A Thousand Islands", Yoho and Banff.

Parks attract tourists and mountaineers. First of all, they admire the picturesque views of rocky mountains, lakes, glaciers and coniferous forests, where wild animals live.

Test
