

Iron emergence history

Made by Anastasiya Chekrygina
Form 10 C
Lyceum №4

The iron's story began a long time ago. First, a flat stone was used to smooth clothes. Rubel was the tool for ironing in Russia.

The closest was a precursor of the modern iron brazier of coals. Clothes stroking tool was very similar to a large frying pan.

By the middle of the XVIII century, there was an iron with coals inside. Some irons weight was 10 kg.

Before using the iron was warmed up on the oven.

Later steam, gas and even alcohol irons. In 1882 Henry Seely patented the electric iron. Ever since the iron design remained virtually unchanged, except that the improved of some details.
