

A city skyline at dusk with a bright sun low on the horizon, casting a glow over the buildings and water. The sun is positioned centrally in the upper half of the frame, creating a strong lens flare effect. The city buildings are silhouetted against the dark sky, with some lights visible. The water in the foreground is dark and reflects the city lights.

# The Environmental Pollution

Ecology is a science which studies the relationship between all forms of life on our planet with it's environment.

Earth is polluted with  
all kind of  
technological,  
agricultural,  
chemical, nuclear and  
other wastes.

Polluted air, land and  
water are harmful to  
plants, animals and  
people.

Pollut  
ed!

Environmental problems  
today is air pollution,  
smog, water pollution,  
destruction of natural  
resources.

A dramatic sunset over the ocean. The sun is a bright, glowing orb on the horizon, casting a long, shimmering reflection across the dark water. The sky is filled with layers of clouds, some dark and heavy, others thin and wispy, all illuminated from below with warm orange and red light. Several birds are silhouetted against the sky, flying in various directions. The word "AIR" is overlaid in the center of the image in a large, blue, serif font.

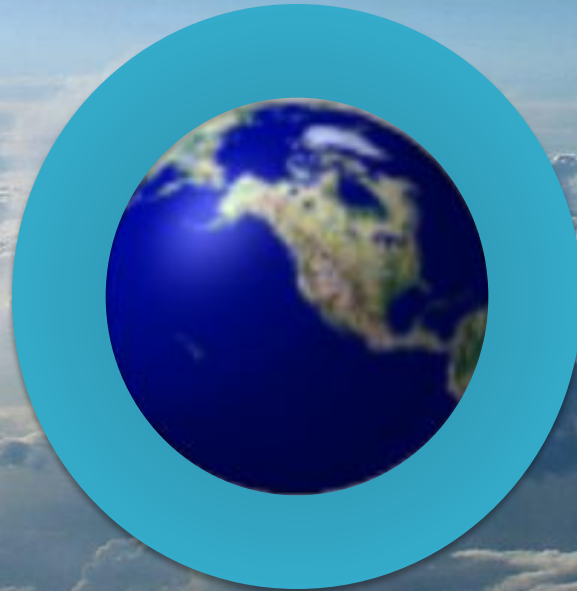

AIR

Polluted air can cause  
illness and even death.

The ozone layer in the upper atmosphere protects the world from sun's harmful rays.

The chemical used widely in aerosol cans, refrigerators and other products are destroying this precious layer.

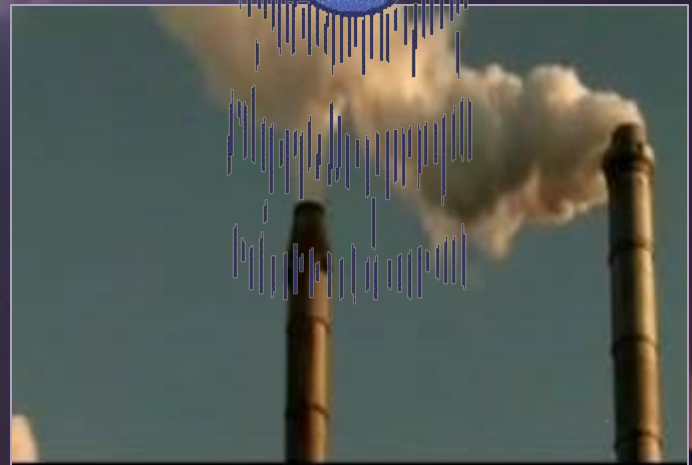

**Dangerous!**

The electric power station burn coal to produce the energy that keeps your light on.

That burning coal gives  
off gases that cause the  
greenhouse effect and  
acid rain.

# WATER

Many polluted water are merge in the rivers, lakes, sea.

Polluted water kills fish and other marine life.

Factories produce necessary things, but they pollute the water.

We shouldn't throw litter around rivers or lakes!

We shouldn't wash our car in the rivers or lakes!

We must turn off taps when we don't need water any more!

# LAND

If you throw a glass bottle on  
the ground it will litter on Earth  
**forever.**

Aluminum cans and plastic bottles last up to 500 years.

Tin cans last 100 years.

Litter is  
not only  
ugly, but it  
can be  
harmful to  
wild life.

We must  
not  
throw  
litter on  
the  
ground.

Some animals can  
get hurt on sharps  
cans or broken  
bottles.

# TREES

Most paper thrown  
away in the office  
just has printing on  
one side.

Old newspapers should be reused.

Because making newspaper from "old" paper requires less energy than making paper from trees.

Besides we take 500,000  
trees just to make the  
newspaper we reach every  
Monday.

A lot of young people  
are worried by  
environmental problems.

Only together  
we save the  
world!

Remember it!
