

*Ecology.*

*People depend on the planet, on the Sun, on animals and plants around them. Every day our ecology becomes worse. People destroy wildlife and cut down trees. In big cities there is air pollution from cars, buses and factories. In farming they use toxic chemicals. All these chemicals are very harmful for water and atmosphere.*

*We must take care of nature because we are a part of it. To save our planet we must follow the rule: reduce, reuse, recycle. There are a lot of special organizations which are trying to save our nature. One of them is Greenpeace. They help flora and fauna survive.*

*We must protect our environment, our life, the future of our children before it is too late.*
