

ABSEILIN

G Extreme Sport

Abseiling –

(German 'abseilen' – to rope down)
an extreme sport, technique for descending
using special tools and protection.

Petit Dru

The technique was created
by Jean Esteril Charlet during climbing
Petit Dru in 1876. After lots of failures
he finally reached the summit in 1879.
This experience helped him to perfect
skill of abseiling.

Today it's not only a sport. For example abseiling is also used by rescuers, special forces or to wash the windows of high buildings.

Original technique was very different from modern ones.

Method of Hans Dulfer is considered as classic. Australian rappel and tandem rappelling is also popular.

Dulfer method

Australian rappel

Equipment

for abseiling

Descender

Carabiner

Rope

Helmet

Knee pads

Boots
(with good grips)

Elbow pads

Gloves

Climbing harness

Abseilers can choose different places

and seasons

Professional climbers think abseiling is more dangerous than the climbing itself because a rope is carrying the climber's weight all the time, not only in case of fall. So doing this sport is prohibited in many areas. Abseiling caused lots of injuries and death, but nothing can stop really brave people.

If you want to try this extreme sport, all you need are the equipment, a high wall and an instructor.

Would you like to start
abseiling?

Thanks for watching.
Hope you've enjoyed it!
