

Australia

Animals

The Kangaroo

Kangaroos live about 9-18 years, but some live to 30 years.

The largest kangaroos - Red Kangaroo. They can jump at a speed of 70km / h over short distances, but usually they travel 20 km / h.

The Koalas

Koala is a lazy animal, it sleeps about 20 hours a day. Koala feeds on many species of eucalyptus leaves, which are unsuitable for other animals.

The word "Koala" came from the vocabulary of aborigines, it means "do not drink."

Ostrich Emu is a large flightless Australian bird. This is the second largest bird in the world, after the African ostrich, it reaches 1.5-2 meters in height and weighs 60 kilograms.

Emu is an excellent runner at short distances; they develop a speed of 50 km / h. But usually EMU walks at a speed of 4-7 km / h, covering 10-25 km per day.

Emus are also nice to swim and are able to swim across the river..

Other animals

Dingo is a wild Australian dog.

The possums are small, the size of a cat, Australian animals.

The Tasmanian Devil is a unique animal that lives on the Australian island of Tasmania.

The Wombat

The Crocodiles - one of the inalienable character of the Australian romance.
