

# **GEOHELMINTHS EGGS CONTAMINATION OF SANDPITS IN VLADIVOSTOK, RUSSIA.**

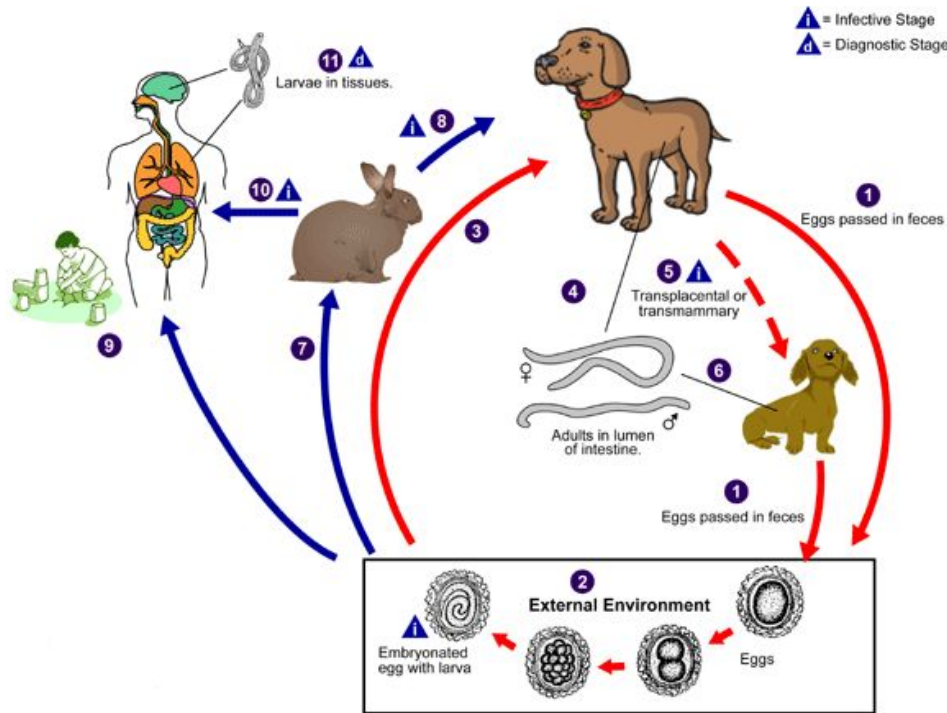

**Moskvina Tatyana Vladimirovna\***

**Bartkova Albina Dmitrievna<sup>1</sup>**

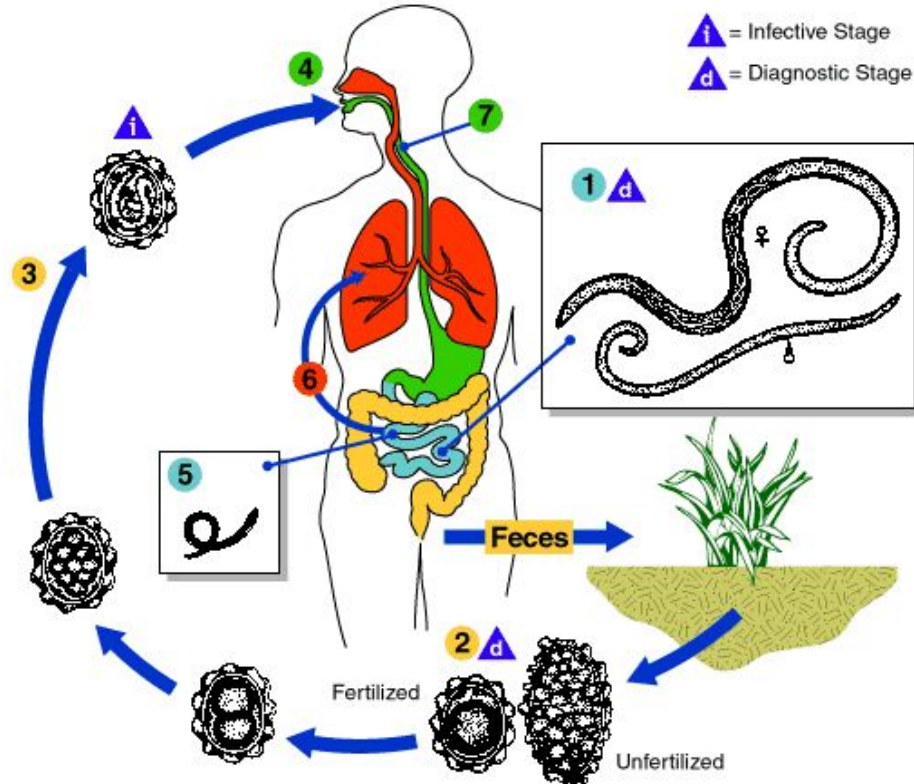

**Ermolenko Alexey Vasil'evich<sup>2</sup>**

# The most widespread geohelminths

## ? *Toxocara canis* life cycle

## ? *Ascaris lumbricoides* life cycle

# Materials and methods

- ? Totally 60 samples from five district were collected and analyzed. Sand samples were analyzed using Romanenko's method

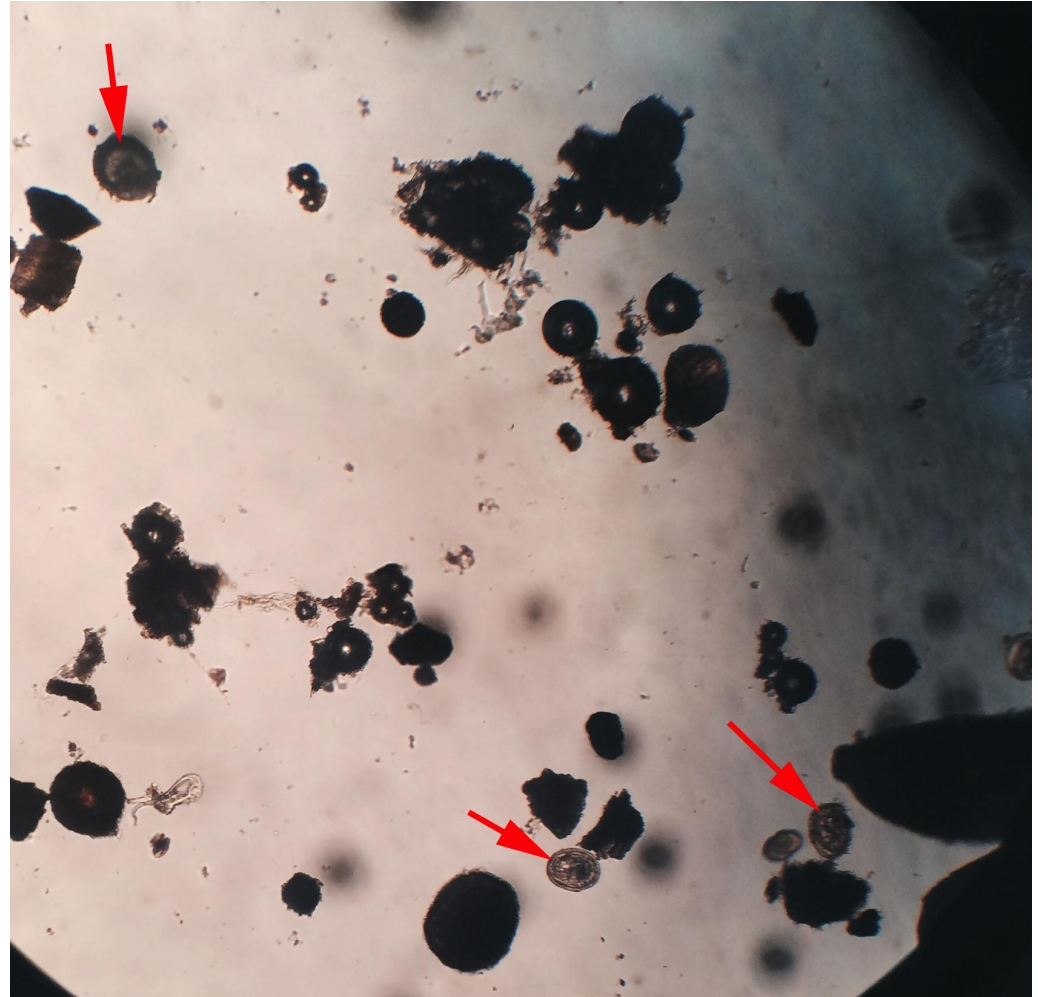

$\text{NaNO}_3$

# Results

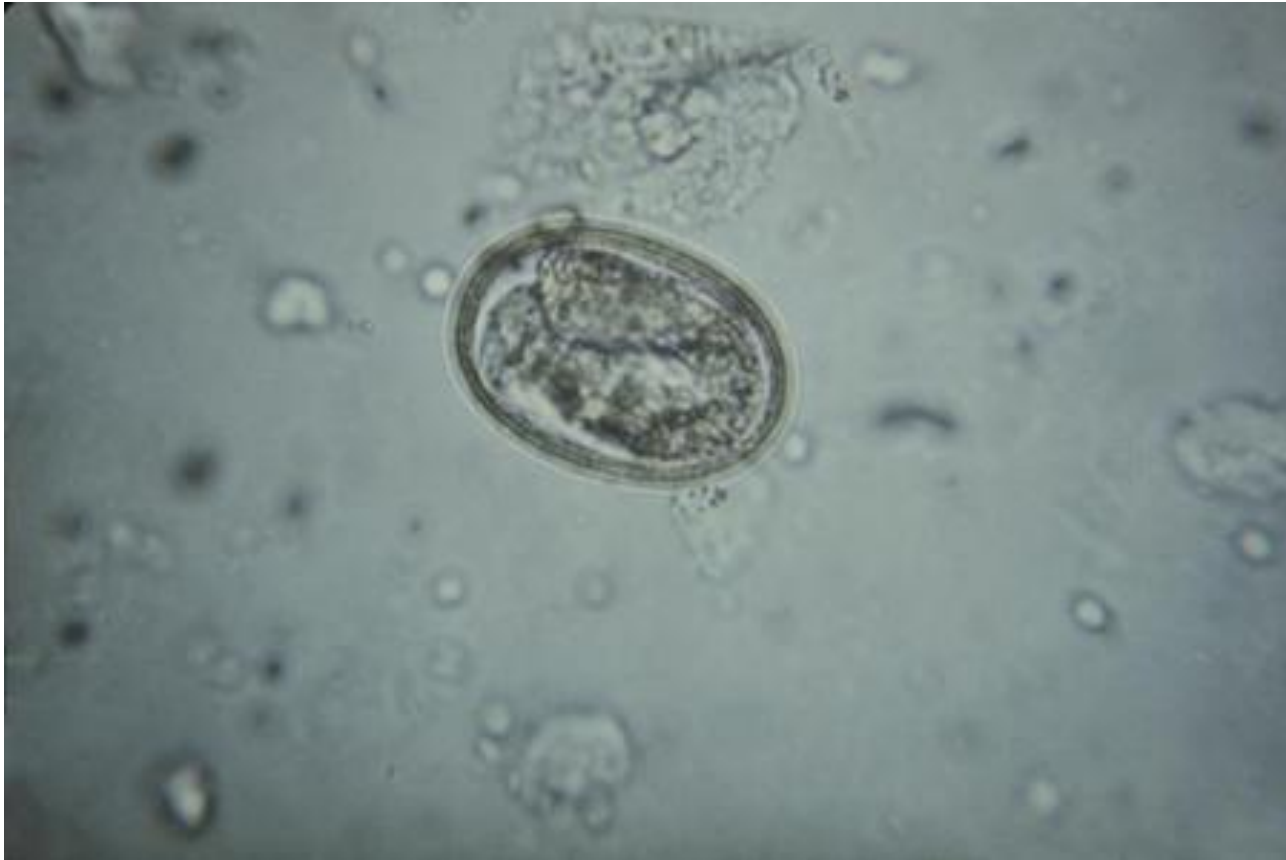

Egg with larva

*Toxocara* spp.eggs

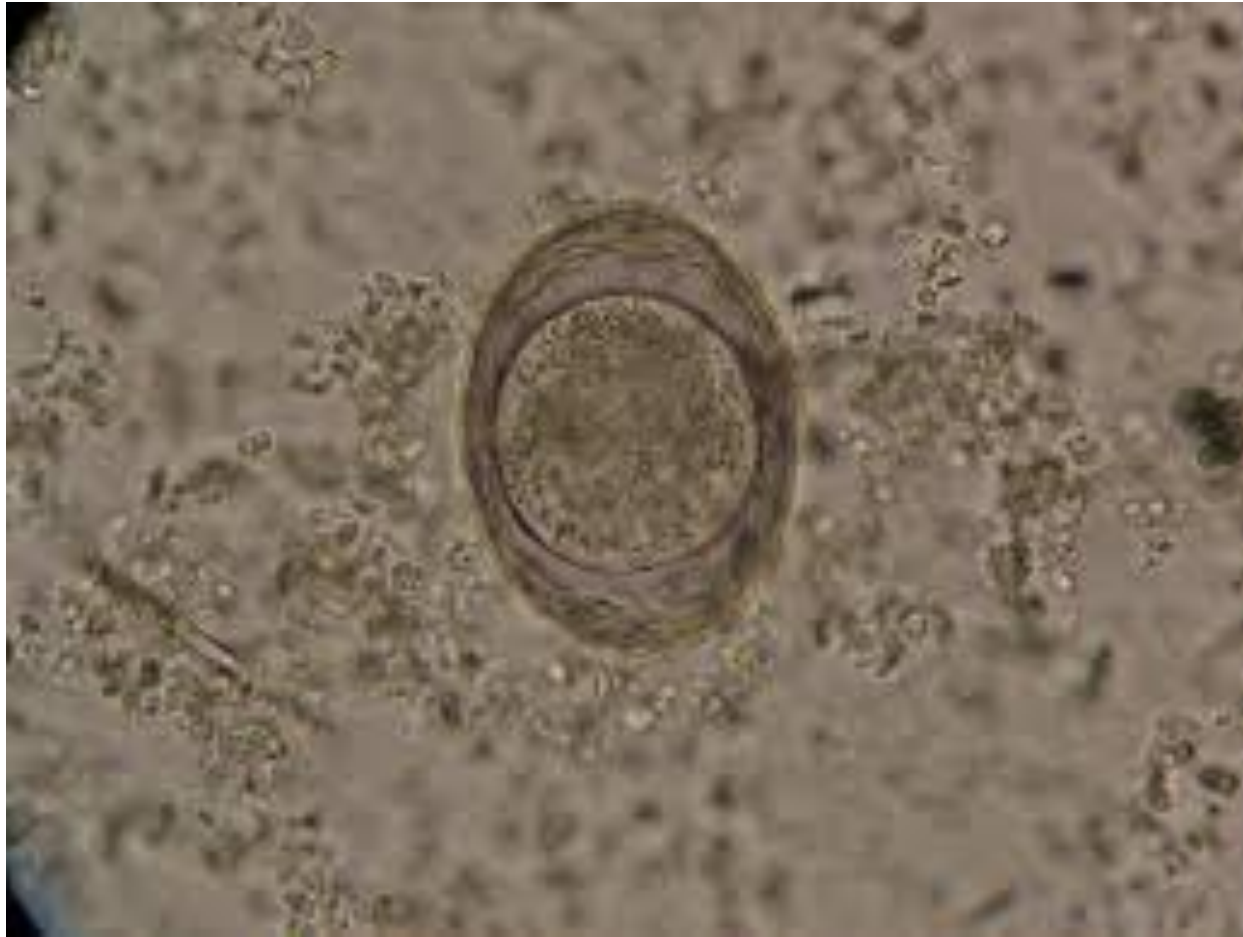

*Ascaris* sp.egg

*Toxascaris leonina* egg

# Results

Table 1 Parasites found in soil samples

Parasites found	Number of soil samples	Min-max number of eggs/25 gr
<i>Toxascaris leonina</i>	2	1-23
<i>Toxocara</i>	14	1-6
<i>Ascaris</i> sp.	7	1-3

Table 2 Results of sandpits samples analyses in each district

District	Total number of collected samples	Number of positive samples	Min-max number of eggs/25 g
Pervorechenskij	12	3	3-5
Sovetskij	11	3	1-3
Pervomajskij	16	5	1-26
Frunzenskij	11	4	1-3
Leninskii'	10	3	2-18
