

Why do we throw away so much?

school № 53
Saratov
2014

Many countries bury about millions of tons of rubbish every year.

It is known that in one year a European family throws away about 50 kilos of paper and about 60 kilos of plastic.

I am sure that we don't have to throw away all our waste paper, glass, metal and plastic. We can recycle a lot of domestic rubbish.

Many things that we throw away can still be useful. In fact it's possible to recycle 80% of domestic rubbish.

We can recycle most kinds of paper, glass, metal and plastic. But only 4% of recyclable material is recycled.

Recycling is expensive.

Recycling saves trees and energy and protect environment from pollution.

Classmates, let's make our contribution towards saving the world!
