

A serene landscape featuring a calm pond in the foreground, reflecting the sky and surrounding trees. A large, leafy tree stands on the right bank, while a willow tree with long, drooping branches is on the left. The background is filled with more trees under a clear blue sky. The overall scene is peaceful and natural.

PROJECT FOR ENGLISH

TOP 10 UNUSAL ANIMALS

Did Danilova Dasha

Red-lipped fish — swallow

This unusual fish that live in the Galapagos Islands, is actually a lousy swimmer! The fish has legs instead of fins and so she walks on the ocean floor!

Fish PACU

This fish lives off the coast of Papua New Guinea. Local fishermen knew about the existence of such a terrifying predator with a creepy jaw, before entering the water, always starayutsya protect the most vulnerable parts of his body!

Shark — house

This is a very rare shark is sometimes called a living fossil. It is the only extant representative of the family Scapanorhynchus, whose history goes back 125 million years. Sharks – goblins inhabit around the world at depths exceeding 100 m. Moreover, adults prefer to settle deeper than young. Given such a depth habitat of this strange shark frightening appearance, it can be concluded that for humans it is not dangerous.

Blue parrot fish

This fish is found in the Atlantic ocean and 80% of their time in search of food!

Mollusk Glaucus Atlanticus

This creature, also known as the blue dragon, moves slowly in the water column. The mollusk is easily found in shallow warm ocean waters: it helps to float the bag with gas, located in the abdominal cavity.

Ant – Panda

Motility is a family, with more than 3,000 species of wasps. Yes, it is the OS, not the ants! Why confuse them with ants? Just the females of these wasps have no wings and resemble large hairy ants. The first of these unusual wasps found in Chile. Insects known for their extremely painful stings, so they are often called "cow killers" or "cow ants". Representatives of the family mutillid black and white colouring is often called ants, pandas is due to the color similarity with a giant Panda, living in China.

The hawk — Hummingbird

The resemblance to a Hummingbird hawk moth this attaches to the fact that it feeds on the flowers using a long proboscis, and make a sound like the buzzing hummingbirds. This insect very well distinguish between colors, which helps him from hundreds of flowers to choose from.

African tree Viper

From the name it is clear that this snake lives in trees. Arboreal vipers that live in the tropical forests of Africa, they are predators who hunt only at night.

Okapi

The birthplace of this mammal is the Democratic Republic of the Congo in Central Africa. Despite the black-and-white stripes, like a Zebra, the Okapi is a relative of the giraffe.

Thorny dragon

This lizard is brilliantly camouflaged in desert landscape, and to protect from predators she has a "false head". Exposing the decoy on the surface, but the real head dragon hides in their spikes.
