

Урок английского языка в 10 классе по теме «Земля – тревога!
Вымирающие животные»

Учитель : Гладкова О.И. МОУ СОШ № 24 г Кострома.

Earth – Alert ! Endangered animals.

I am the Earth
And the Earth is me.
Each blade of grass,
Each honey tree,

Each bit of mud,
And stick and stone,
Is blood and muscle,
Skin and bone.

And just as I
Need every bit
Of me to make
My body fit.

So Earth needs
Grass and stone and tree
All things that live here
Naturally.

Problems to be discussed:

- What animals are especially endangered?
- What environmental problems cause the extinction of animals ?
- What can you suggest in order to help solving the problem?

R U S S I A

POLAR BEAR.

Polar bear's habitat is the Antarctic Peninsular. It is rather a big animal and lives on ice. Polar bear can swim very well. When animal meets an iceberg on its way it can swim over long distances.

Polar bear can also extinct as people hunt it badly.

Siberian Tiger

- Siberian tiger lives in thick forests of Eastern Russia. It is really a unique animal. Its beautiful skin makes people hunt. That is why the number of animals has reduced up to 100 specimen.
- Scientists are very anxious about it . The situation demands some definite measures.

CHILI

Humboldt penguin.

These are Humboldt penguins as they live near the Humboldt Stream. They have white glasses round eyes and black rings on the bellies. Humboldt penguins don't change their living place. There are few places they live : South America coast and Chili.

Animals build their nests on rocks but live mostly on ice and under water. Searching for food they can dive up to 50 metres deep. Chicks need food every day so their parents have to walk about 70 km to the sea and back in order to bring fish.

One parent goes hunting, the other stays with a chick and warm it. The number of animals has been reducing. Nowadays there is a bit more than 12 000. Fishing is the main human activities here and penguins have practically nothing to eat.

ITALY

ITALIAN WOLF.

- **ITALIAN WOLF.** (*Canis lupus italicus*), Apennines' wolf is a kind of grey wolf living in the mountains of Italy. It was found and described by biologists in 1929 for the first time. The number of animals has been increasing and recently it has been found in Switzerland. During the last 4 years wolves appeared in France. In all three countries this animal is under environmental protection.

- In [2004](#) three wolves were found in Siena.
- There were some kinds of toes on their legs.
- Something has caused genetic mutations and it is very dangerous for animals.
- However some biologists have been inspired by such a phenomenon as it may help in their investigations of hybrids.
- Italian wolf feels comfortable in towns too that is why it may hunt domestic animals..

J A P A N

Check your answers :

1. Climate change in Antarctica has a ... effect.
a) mixed b) warming c) freezing
2. Ice is thickening on ...
a) the land b) on the edges c) everywhere
3. The temperatures have risen around the Peninsula ...
a) 7 times **b) 5 times** c) 10 times
4. Ice shelves the size of ... are floated away.
a) small cities b) small **c) small countries**
5. ... penguins help scientists in their reseach.
a) adeli b) imperior c) king
6. Nowadays ice has become ...
a) unusual b) unremarkable **c) unreliable**
7. Adelies are used to live ...
a) on ice b) on rocks c) everywhere

Express yourself:

What can you suggest in
order to protect
endangered animals?
