Экскурс в историю

PROFOUND HYPOTHERMIA APPARATUS FOR OPEN HEART SURGERY, 1906

Dr. Augustus Duggan has been successful with open heart surgery in the 1900s. His apparatus was designed at Lincoln's Inn, London. It worked by drawing the blood through a low exchange. It also, it claims, the heart stopped completely. It became cold and bloodless, allowing surgeons to repair holes in the heart and other problems. Other machines were being produced for heart lung machines.

IS STOPPED FOR 45min
NEW TECHNIQUE

A new technique for heart operations is described by the British Medical Journal today as a notable advance. The technique was used on a child in fact.

SHOWED EXPERTISE

The first machine, built by Dr. Augustus Duggan, was made in 1906. It was a simple machine, but it was the first of its kind. It was used to perform open heart surgery. The machine was made of metal and had two large glass reservoirs. It was used to draw the blood out of the patient and pump it back into the body. The machine was used to perform open heart surgery on a child in fact.

IMPROVISATION

The first machine was made of metal and had two large glass reservoirs. It was used to draw the blood out of the patient and pump it back into the body. The machine was used to perform open heart surgery on a child in fact.

NATURAL CHILDBIRTH

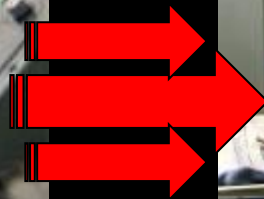

The first machine was made of metal and had two large glass reservoirs. It was used to draw the blood out of the patient and pump it back into the body. The machine was used to perform open heart surgery on a child in fact.

HEART EXCHANGER

The first machine was made of metal and had two large glass reservoirs. It was used to draw the blood out of the patient and pump it back into the body. The machine was used to perform open heart surgery on a child in fact.

Возможности для России

- быстрые темпы развития за счёт оказания поддержки (интерес к Криорусу возрастает)
- опережение Европы
 - достижение уровня США

Планы по крионике

- анализ возможностей активного привлечения средств
- отработка процедуры на собаках
- расширение рядов членов организации
- в перспективе — строит-во нового здания

(Опасность смерти)
